Through a dynamic partnership, Scoular is able to provide a highly sustainable supply of 18:12 fish oil. As a vertically integrated operation, our manufacturer utilizes its facilities along the coast of Morocco and Mauritania to produce quality oils that are a reliable alternative to Peruvian fish oils.

Reliability, Quality, Sustainability – The natural upwelling situated off the coast of Morocco and Mauritania offers a unique marine environment concentrated with nutrients and phytoplankton. Inhabiting the richest of only four major upwellings in the world, the native pelagic species thrive on the Omega-3 EPA- and DHA-rich phytoplankton, and in turn provide a valuable source in our fish oil.

Did you know...
The Food and Agriculture Organization of the United Nations oversees the Total Allowable fish Catch (TAC) for each country on a yearly basis. In Morocco, the pelagic TAC represents a smaller proportion of the biomass compared to Peru. The result is a much more sustainable source of pelagic fish and fish oil.

- Long chain Omega-3 fatty acid ratio of EPA to DHA is 18:12
- Processing entails neutralization, purification, bleaching, winterization, and deodorization
- Rigorous sustainability management policy in place
- Integration into local communities to create positive long term economic impact
- Recognized by GOED, IFFO, and FOS
