

Burlington, WA Facility

Frozen Pet Food Ingredient Processing

As a leading pet food ingredient supplier, Scoular purchased the Burlington, Washington facility in 2023 to add to our asset network to produce a variety of upcycled, high-quality marine and animal proteins. The facility, located in the Pacific Northwest, provides Scoular with greater control over our supply chain, allowing stronger quality management and providing specific value-added solutions for our pet food customers. Most of these ingredients can be processed as MSC certified sustainable seafood products, are available emulsified or deboned, and are direct excess, ensuring the entire fish is used after being processed for human consumption. By upcycling these ingredients, pet food manufacturers are able to tell a strong story of reducing environmental impact and minimize the amount of food waste.

Frozen Products

Available in 50 pound blocks.

- Salmon
- Sole
- Cod
- Tuna
- Hake
- Chicken

Upcycled & sustainable nutrition

Third-party audited

Locally caught fish
